DETAILED ACTION

1. Claims 16-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dasgupta (5,318,669) in view of Ostendorf et al (5,397,435) or Van Phan et al (5,437,766).

Dasgupta discloses tissue and paper towels containing the combination of the claimed cationic wet strength agent and the claimed anionic dry strength agent. The combination of strength agents are added in the ratio of 1/20 to 10/1, at a total concentration of 0.1 to 2% based on total weight of pulp. Whether or not the cationic wet strength agent and anionic dry strength agent to the aqueous pulp during the process of making the paper is moot because the amount of these agents in the final paper product is the same. As to the strength, stiffness and stretch these characteristics are obvious optimization of the amount of wet strength agent, use of softening agents and foreshortening of the web by conventional differential speed transfer and/or creping, use of which parameters are taught by Ostendorf et al or Van Phan et al who additionally show that hardwood fibers lengths in the range of between 0.5 and 1.5 mm and softwood fibers 2mm or greater column 13 and 15 of the references respectively. This amount falls with the claimed amount of cationic wet strength agent and anionic dry strength agent. The paper contains majority soft wood fibers and a minor portion of hardwood fibers. Ostendorf et al and Van Phan both evidence the strong desirability of using the Dasgupta combination of strength agents in tissue paper.

2. Claims 16-30 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1-8 of U.S. Patent No.

6,419,789. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims are obvious product of the process claimed in the patent
